E-mail: kaipie(at)utu.fi

Research
The studies on dental caries aim to evaluate the effectiveness and pertinence of preventive measures and preventive programs in a low caries population. The studied topics include e.g. xylitol, erythritol, the prevention targeted at families with young children, and organizing health promotion in public health care.

Personnel
Senior scientists/Post docs
Eva Söderling, University of Turku
Pentti Alanen, University of Turku
Marja-Liisa Laitala, University of Oulu

PhD students
Irma Arpalahti
Aija Hietala-Lenkkeri
