►TCSM – Mission and Vision

TCSM has originally been founded to support the most talented scientists in early phases of their independent research careers. After its ten years of existence, this mission still remains as the main mission of TCSM. To keep up with this mission, the collegium researchers have been selected from highly competitive international calls and the chosen scientists have settled down in the most suitable environments at the University of Turku according to their scientific fields. TCSM values multi- and inter-disciplinarity in science as it believes that interactions over the usual boundaries have high potential to create ground-breaking discoveries. To facilitate these types of interactions, TCSM arranges joint meetings to its members on a frequent basis – not forgetting to reserve time for informal interactions besides the formal presentations. The coordinator of TCSM works in close contact with the researchers to provide them with help, instructions and advice whenever needed. Moreover, the board members of TCSM contribute to the success of the researchers in the best possible ways providing intellectual and practical support. Although the resources of TCSM are more limited than in some leading universities, TCSM tries its best to create a scientifically stimulating and supporting platform for the future scientific leaders.

► Ten Years of Research Excellence in Science and Medicine

The Turku Collegium for Science and Medicine (TCSM) was launched with funding from the Consortium comprising the University of Turku and the Turku School of Economics in 2008. During its years of operation, TCSM has become an integral and permanent part of the University of Turku. TCSM selects its researchers through an international competition, which is open to all researchers in the fields of Science and Medicine. TCSM establishes a multidisciplinary, interactive research platform for young dynamic scientists that strengthens research excellence at the University of Turku.

TCSM researchers are appointed for fixed-term positions at the University of Turku including postdoctoral and mid-career (collegium) researcher stages. The positions are funded for 3 years at the time, with a possibility for a two-year extension for Collegium Researchers. TCSM Collegium Researchers receive a €20000 starting grant for three years for their research costs.

TCSM has recruited Collegium Researchers every other year during its operational years. During this time, 30 Collegium Researchers have been recruited in total. In 2016, the university's new postdoctoral research programme started and the first five postdoctoral researchers were recruited.

In 2018, the TCSM consisted of 25 Researchers, 10 Collegium Researchers and 15 Postdoctoral Researchers. The Academy of Finland granted three TCSM researchers Academy Research Fellow positions in the year 2018. The Faculty of Science and Engineering hosted six Collegium Researchers and 10 Postdoctoral Researchers. The Faculty of Medicine hosted four Collegium Researchers and five Postdoctoral Researchers.

TCSM celebrated its 10th anniversary with an open anniversary seminar in December 2018. The seminar covered the time when the Collegium was established and its present and future perspectives. The seminar included speeches from current and former Collegium Researchers and two keynote speakers were invited to the seminar to present their research careers, Professor of Radiology Anna-Liisa Brownell from Harvard Medical School and Academy Professor, Academician of Science Eva-Mari Aro. For further details, see "[Turku Collegium for Science and Medicine Celebrates its 10th Anniversary](#)".

Call Announcements for Collegium and Postdoctoral Researcher positions are planned to be announced in early autumn 2019.

Postdoctoral Researchers

The person to be appointed to the postdoctoral researcher position is required to hold a doctoral degree, which may not have been completed more than five years before the expiry of the application submission deadline. Particular attention is paid to the candidate's international research experience. The successful candidate should have a linkage with the research activities of the University of Turku and should, as a rule, be able to join an existing research group or work under the supervision of a senior researcher at the University of Turku.
